

ASACERT

ASSESSMENT &
CERTIFICATION

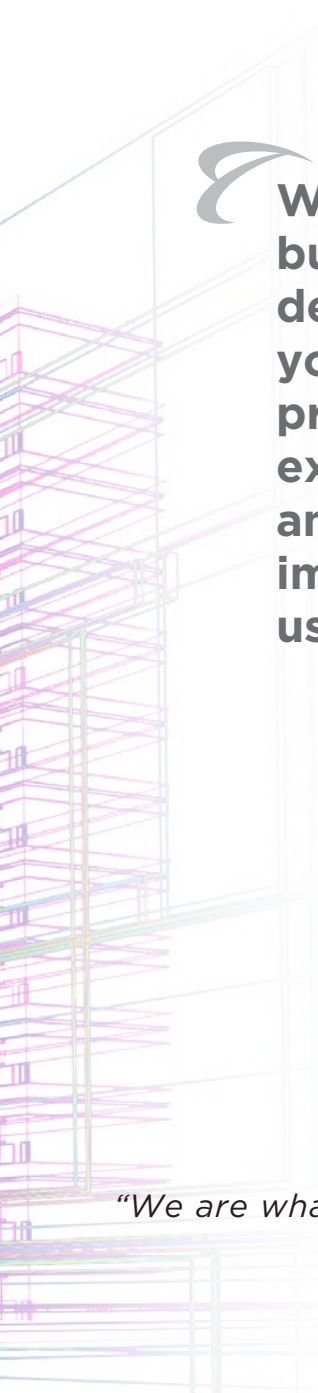

IMPROVE YOUR VALUE

ASACERT Group offers inspection, certification and evaluation services to support companies in any sector and of any size in the implementation of **control, assessment and estimation** activities that require high levels of technical expertise, vertical skills and advanced equipment.

This means employing **qualified personnel with up to date competences**, a service approach conducted with professionalism and confidentiality, but also flexibility, proactivity and attention to the companies' needs.

ASACERT professionals - located throughout the country - have specific expertise in these sectors, undergoing periodic verification that they are up to date with new methodologies and auditing techniques, changes in industry regulations and introduction of new certification schemes in order to ensure robust, advanced technical assessments. Our experience gained in different areas allows us to offer both a **timely, specialised response**, and to develop **comprehensive services**.

We want to be an added value for businesses, contributing to their development and goals. We support your employees with our expertise and professionalism, by transferring our expertise gained through years of study and work in the field. We seek continuous improvement, offering those who work with us a tangible, competitive advantage.

"We are what we repeatedly do. Excellence, then, is not an act but a habit"

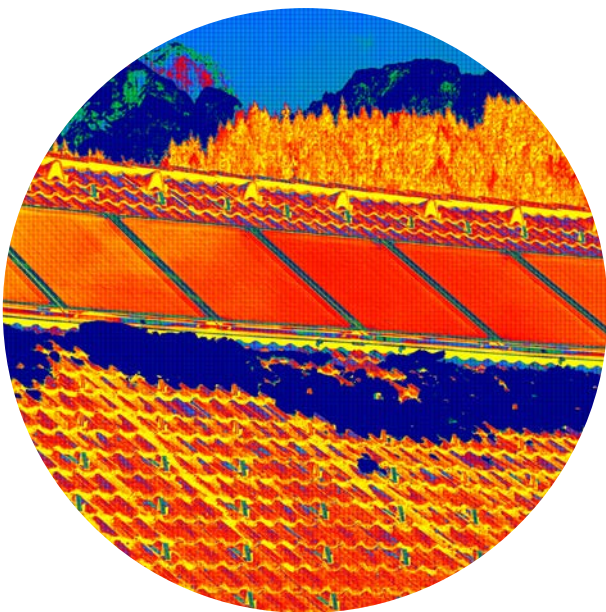

Aristotele

The ASACERT Group offers inspection, certification and valuation services, in accordance with international standards ISO/IEC 17020 and ISO/IEC 17021, with the following accreditations: **ACCREDIA** in Italy, **UKAS** in United Kingdom, **EIAC** in UAE and GAC in Georgia, as well as notification to the European Community for a CE mark (CE 2021).

In 2016, ASACERT obtained the **legality rating** (two stars) from the Italian Competition Authority, a tangible sign of its commitment in terms of quality, social responsibility, legality and transparency.

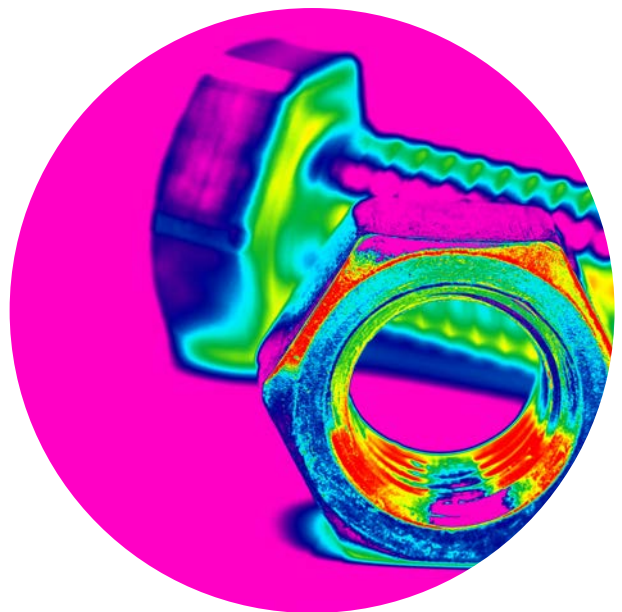

ASACERT stands out in the field of **engineering assurance** services for its propensity to act as a business partner thanks to continuous research and significant **investment in technology and human resources**.

ASACERT uses proven methodologies, to the highest standards in the industry, but also a personalised approach aimed at integrating ourselves into different operating environments, ensuring maximum reliability, competence and confidentiality, with a willingness to listen and pay attention to your business's needs.

Inspection

The inspection activities – primarily the project and design assessment and the inspection during construction process – are fundamental to verify the correct preposition and implementation of public and private structures and infrastructures. They ensure the correction of potential structure or construction errors and the normalisation of the risk in the insurance world. ASACERT specialists support Public Bodies and companies in the constant and punctual verification of the techniques and the materials used, in the implemented practices and in the processes followed, reducing the risks and increasing the competitiveness.

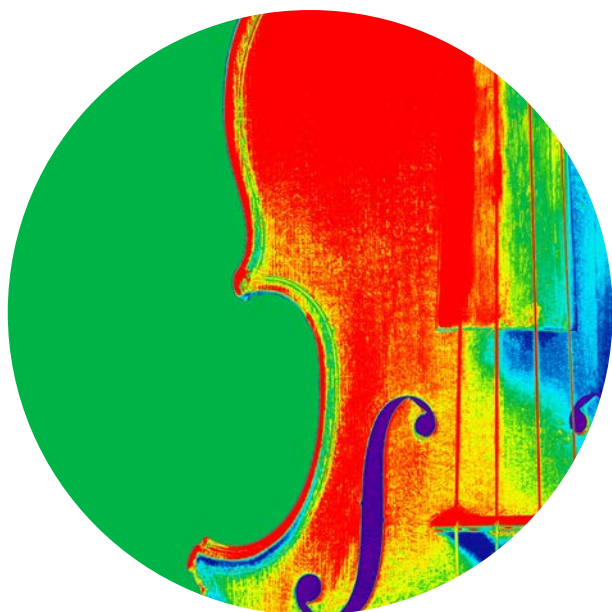

Certification

The certification issued by ASACERT ensures the application and maintenance of an excellent management and organisational system that is a company's best calling card to its customers and stakeholders, making it more efficient and reliable in the marketplace, better qualified to take part in competitive bid or to answer to its clients' needs. Integrated certification testifies to your desire to grow and that you pay the maximum care and attention to the effectiveness of your processes, employee motivation and customer satisfaction, defining work methods and criteria that are consistent with the purpose that your business decides to pursue.

 The development of ASACERT isn't just based on budget figures, it has its roots in the enhancement and growth of its staff. When investment in resources and development exceeds fixed capital investment, it means that your business stops being a place that merely produces and becomes a place that thinks. This allows us to offer substantial added value and a close working relationship with your business.

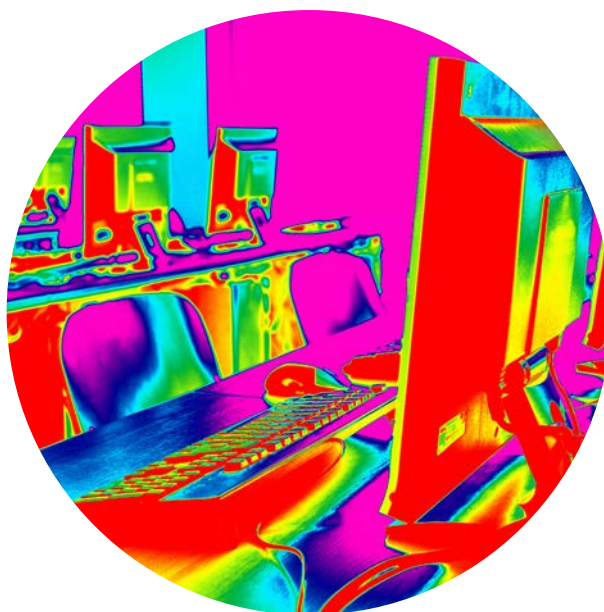

Fabrizio Capaccioli, *General Manager, ASACERT*

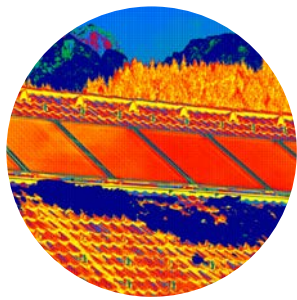

Evaluation

The evaluation activities – financial and insurance estimates – allow private, Public Bodies and companies to verify, through objective evidences, the exact value of their tangible assets (buildings, plants, batch of goods, production sites, works of art, collections, vintage cars or boats) and intangible (trademarks, patents, brand, know-how, human capital). ASACERT, recognised by the market and Insurance companies, works through third party and independent professionals, specialised in different areas of expertise, and guarantee to examine all the factors that can contribute to the determination of the value of your assets (accounting, technical, financial and legal, environmental, market and geographical factors).

Training

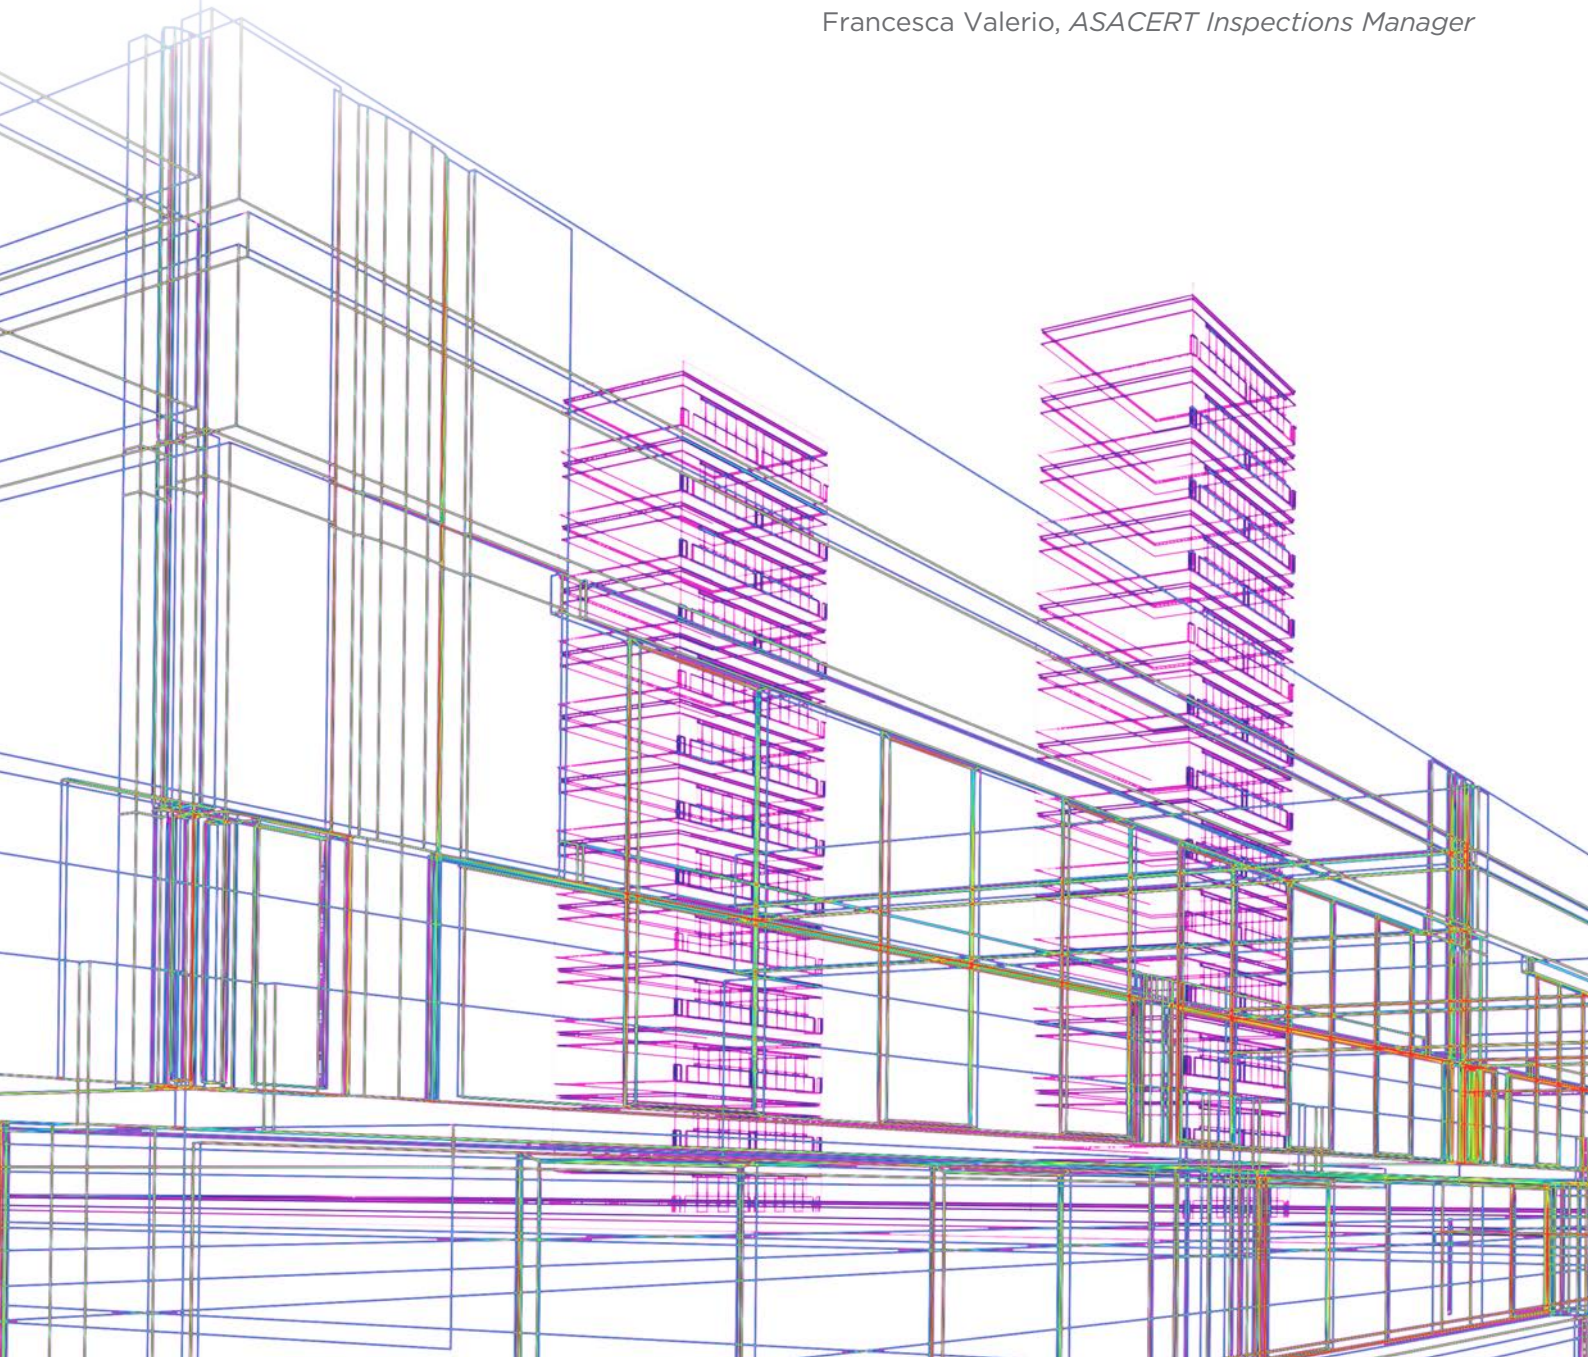

Investing in skilled staff is beginning a journey of growth and innovation that can determine the success of a business. To this end, ASACERT organises training courses aimed at a wide target audience from very diverse industries. Our qualification courses and professional courses are accredited and provided in collaboration with prestigious organisations and are characterised by the technical-scientific expertise of our lecturers and for the learning methods based on the direct involvement of participants and exercises in the classroom.

INSPECTION

Thanks to our versatility, we are also able to cover less common specialisations, providing services for more complex works. Our ability to react quickly and to manage commissions well allows us to support you as a client and to better respond to your needs.

TRAINING

ASACERT provides different skills acquired in the field by its technicians, organizing accredited training courses, targeted at sector managers, professionals and technicians working in a greater number of strategic fields than ever before, such as:

- energy certification
- quality management systems
- health and safety in the workplace
- the environment
- certification of construction products

Each course is structured according to the needs of the participants and implemented through a modular structure. At the end of the teaching process there is a final rating: passing leads to obtaining professional qualifications that are recognised worldwide.
